

# ATARI MUSIC - TAPES

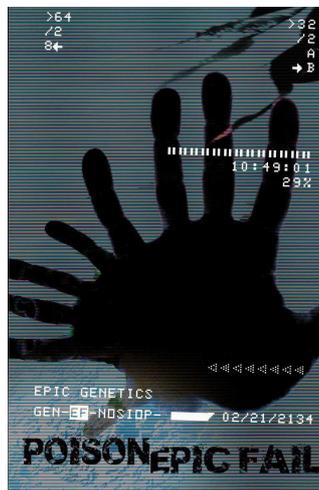

All of us were infected by the glorious 1980s. Our computers had their heydays and so did the music market which delivered some great songs either by LP or cassette. 30 years have passed by and the cassette has virtually disappeared from the market. Some geniuses have now decided to unite the two, a cassette with some once unimaginable sounds coming out of the Pokey chip.

With this in mind, we now have a new ally in the sound artist "POISON" who offers his support with copies of his great music on cassette. "POISON" has managed to produce two cassettes worth of songs which were created on the Atari 8-bit. The songs play on a normal cassette player, not through the Atari as such. These are factory produced and are limited to 50 units each (limited edition). Also available on each inlay is a link to the songs in MP3 format which you can download. So if you are a collector, we're sure that you'll love these cassettes. And lets be honest, don't we all consider that things from back in the 80s were better than they are today, if so, ladies and gentlemen, welcome to the world of Pokey music. Dive in and be inspired!
